

pikered

The offensive method that revolutionizes Cybersecurity

A new Cybersecurity player

The integration of skills in the fields of Ethical Hacking, Artificial Intelligence and Software development has proved to be the perfect solution to explore new paths, starting R&D activities aimed at the creation of advanced and innovative solutions and services.

Software products

We develop software solutions, including ZAIUX, for the IT infrastructure security market, focusing on the offensive approach and use of AI algorithms.

Customized Cybersecurity plans

We support organizations in the implementation and management of a Cybersecurity program according to ISO/IEC 27032:2012 standard and NIST Cybersecurity Framework.

Advanced Penetration Test

We consider requests from the most demanding customers who seek the necessary abilities for an advanced Penetration Test, developing 0-day exploits and employing Social Engineering techniques.

Red Team Assessment

It is similar to an Advanced Penetration Test, but with different objectives: we will focus our attention on the responsiveness of the customer Blue Team to the cyber-attack performed by our Red Team.

Ethical Hacking, Artificial Intelligence and Machine Learning
cleverly combined by an expert team who offers cutting
edge software solutions and services to mitigate Cyber Risk.
